GETTING STARTED WITH RUNDOO · GO-LIVE DATA CHECK

Data Check: Barcodes & Units

Before go-live, scan a handful of everyday items at a sale and confirm each rings up as the right product, price, and unit. Flag anything that misses.

EVERY SCAN, CONFIRM THREE THINGS

1

Right product

Name and picture match the item in your hand.

Not a look-alike or a different size

2

Right price

The line rings at what your shelf tag says.

Catch a wrong price now

3

Right unit

Test anything you sell in two sizes.

Case as a case, each as each

Run the check in 4 taps

1. In **Point of Sale**, open **Transactions** and start a new sale.
2. Scan a handful of your everyday items, a mix of what you sell.
3. No barcode (mixed paint, cut lumber, by the pound)? Search by name and add it.
4. Confirm product, price, and unit on each line. Flag any miss.

If a scan misses

Flag it, don't fix it

Wrong product, nothing, or an **Add product** screen at $0.00 means it didn't come over clean. Send it to your Rundoo guide.

Most common miss: a barcode pulls up the wrong product, or one with a leading zero drops that zero. Flag which item missed and what came up instead. Your guide fixes it before go-live, and the fix survives the final data sync.
