GETTING STARTED WITH RUNDOO · DOOEY

Dooey: Taking Actions

Ask Dooey in plain English to create a record or take an action, and it does the work. On the big jobs, it shows you the plan first.

HOW ACT WORKS

1

Ask

Type it in Chat like you would tell an employee.

"Create a new vendor called Chadwicks"

2

It acts

Dooey works, then confirms what it created.

Click the link to open the record

3

You verify

Writes need a human eye on anything load-bearing.

Check it before you rely on it

Add a vendor in 3 steps

1. Open **Dooey** (top of the POS sidebar), stay in **Chat**.
2. Type **Create a new vendor called Chadwicks**, press **Enter**.
3. Click the confirmed name to open and finish the record.

The safety line

Single create? It just does it.

Deletes, price changes, or more than **~10 records** at once show a **plan first**, and wait for your go-ahead.

What Act can build: vendors, customers, products, departments and categories, tags, custom price rules, units of measure, and attachments. Paste a whole price list in one message and it creates the lot.

Practice with a clear conscience: this is your practice store, so create test vendors or products freely. None of it touches your real books.
