GETTING STARTED WITH RUNDOO · SETUP

Tag-Based Pricing

Tag a product line once, write a single rule on a rule-based tier, and every tagged item prices itself off Tier 1. No item-by-item editing.

THE WHOLE IDEA, IN THREE MOVES

1

Tag the line

Group products that cross vendors and departments.

A product tag on each item

2

Write one rule

Add it to a rule-based pricing tier.

Discount off Tier 1

3

Rings automatically

Every tagged item, zero counter work.

Right price, every sale

Set it up in 5 steps

1. **Admin** → **Customer** → **Pricing tiers**.
2. Open your rule-based tier, like **Contractor**.
3. In **Rules**, click **Add new rule**, apply by **Product tag**.
4. Pick the tag, set **Discount** off **Tier 1**, then **Save**.
5. **Refresh**, then check an item under **Products**.

Two things to remember

Untagged? Tier 1 price.

An item caught by two rules takes the **lowest price**.

Refresh after Save: the new rule drops into the Rules table once you reload the page.

Rule-based only: a tier's type is locked at creation, so tag rules live on rule-based tiers, never on manual ones.
