Setting Your Cash Float

Your cash float is the standard cash you keep in the drawer. Set it once in Admin, and every close-out balances on its own.

SET IT IN 3 MOVES

1

Go to Admin

It's a store setting, not a register one.

User icon → Admin

2

Open your store

The list of every location you run.

Locations → your store

3

Enter the float

Your standard starting cash. Saves inline.

Cash float field

Running more than one register?

1. On the same page, scroll to **Cash drawers**.
2. Click **Add cash drawer** and name it for your shop.
3. Set its float, then click **Save**. Each drawer closes out on its own.

How it saves

No Save button

The single **Cash float** field saves the moment you click out of the box. (Adding a named drawer does use **Save**.)

Why it matters: at close-out, **Cash for deposit = counted Total minus Float**. Set the float right and your **Short/over** lands at zero. Leave it wrong and you'll chase a phantom short or over every single day.

Next up: this is just the setup. Counting the drawer and closing it out lives in **Counting Down the Drawer**.
