

GETTING STARTED WITH RUNDOD · GO-LIVE DATA CHECK

Does It Scan?

Before go-live, scan a handful of everyday items at a sale and confirm each rings up as the right product, price, and unit. Flag anything that misses.

EVERY SCAN, CONFIRM THREE THINGS

1

Right product

Name and picture match the item in your hand.

Not a look-alike or a different size

2

Right price

The line rings at what your shelf tag says.

Catch a wrong price now

3

Right unit

Test anything you sell in two sizes.

Case as a case, each as each

Run the check in 4 taps

- 1 In **Point of Sale**, open **Transactions** and start a new sale.
- 2 Scan a handful of your everyday items, a mix of what you sell.
- 3 No barcode (mixed paint, cut lumber, by the pound)? Search by name and add it.
- 4 Confirm product, price, and unit on each line. Flag any miss.

If a scan misses**Flag it, don't fix it**

Wrong product, nothing, or an **Add product** screen at \$0.00 means it didn't come over clean. Send it to your Rundoo guide.

Most common miss: a barcode pulls up the wrong product, or one with a leading zero drops that zero. Flag which item missed and what came up instead. Your guide fixes it before go-live, and the fix survives the final data sync.
