

GETTING STARTED WITH RUNDOD · SETUP

On Sale This Week

Build a sale once and the register rings it automatically, then puts prices back when it ends.

Build it in 5 steps

- 1 POS > Products > Promotions > Add promotion
- 2 Name it so it reads on reports and receipts
- 3 Assign to: leave All customers
- 4 Products and Pricing strategy: pick what is on sale and the discount
- 5 Set the dates and **Save**. It rings automatically

Defaults**All customers · Today · All locations**

Leave Expiration blank for open-ended. No Add promotion button? It is a staff permission an admin turns on.

THREE WAYS TO PICK WHAT IS ON SALE

1

By rules

a whole vendor, category, or tag

e.g. 10% off Benjamin Moore

2

By product

a few named items

often a Dollar flat price

3

All products

a storewide sale

a tier-wide discount

Once saved, scope locks. You can change the name, discount, and dates, but not the products, customers, or locations. To change those, deactivate and build a new one. To end it, Deactivate or set Expiration to today, and prices snap back to normal.
