

GETTING STARTED WITH RUND OO · SETUP

Price It Your Way

Set a product's price three ways, round it, and add a volume break. All on one product's **Pricing** tab, one item at a time.

THREE WAYS TO SET A PRICE

1

by dollar

You already know the shelf price.

Type it. **\$8.99**

2

by margin

You price up from your cost.

Type a %, off **Standard cost**

3

by discount

You think in points off list.

Type a %, off **Tier 1**

Add a volume break in 3 steps

- 1 On the product's Pricing tab, scroll to **Alternate pricing**.
- 2 Click **Add new alternate price**. Set **Quantity** to the case size.
- 3 Leave **Discount**, type the %, and **Save**. It rings at that quantity or more.

Two to remember**Breaks don't stack**

Rundoo rings the single best break the quantity earns. And **by margin** needs a real Standard cost, or you'll see "inf margin."

Give a case a break the tidy way: add a quantity break in Alternate pricing instead of a separate case price. Your everyday unit pricing stays put, and the discount rings on its own.

Grayed-out tiers? Those are set store-wide by your pricing tiers, on purpose. You build them in the Pricing Tiers video, not here. One Save on this card writes every tier at once.
