

Right Cost, Right Count

| Check your products' costs, prices, and on-hand counts came over clean.

Step-by-step walkthrough ~4 min read Companion to the [6:08 video](#)

Your products are the heart of your business, and nobody knows them like you do. That is exactly why you are the right person for this check. Before you go live, we bring your catalog over from your old system, and this is your chance to spot-check that the key numbers landed clean. The goal is not to audit every single item. Pull up a few of your best sellers, the ones you could price in your sleep, and make sure the on-hand count, the cost, and the price levels look right. Anything that looks off, you flag to your Rundoo guide, and they fix it on their side before your final data comes over.

WHERE TO LOOK

Open a product you know cold

Head to **Products** in the left sidebar to bring up your whole catalog, then click an everyday item you sell all the time to open its detail page. Every product opens on the **History** tab, and across the top you will see six tabs: **History**, **Inventory**, **Pricing**, **Costs**, **Catalog**, and **Settings**. For this spot-check you only need three of them: Inventory, Costs, and Pricing.

A product's detail page. The six tabs split the product's data; you'll live in Inventory, Costs, and Pricing.

DO THIS

Check the three numbers, in order

1

Confirm the on-hand count

Click the **Inventory** tab. You will see the on-hand quantity for this product at each location. One thing to keep in mind: today's number is a snapshot, not the final word. Your accurate count comes over the night you go live, so right now you are just confirming it is in the right ballpark, not perfect to the piece.

If you run more than one location, glance down the list and make sure the split across your stores looks about right too.

The screenshot shows the Rundoo POS interface. The top navigation bar includes 'Products', 'Custom prices', 'Promotions', 'Spiffs', 'Gift cards', 'Catalog', and 'Integrations'. The left sidebar has 'POS' and 'Admin' tabs. The main content area is titled 'Products' and shows the details for product '05482X-001 REGAL SELECT MATTE -BASE 2'. Below the product details, there is an 'Inventory' tab. The 'Inventory' tab shows a table with columns: 'Location', 'Bin', 'On hand', 'On order', 'Committed', 'Min', and 'Max'. The table has four rows of data for different locations: 'Menlo Park', 'Palo Alto', 'Charlotte', and 'Redwood City'. The 'On hand' column shows values of 0, 0, 0, and -14 respectively. The 'On order' column shows 0, 0, 20, and 0. The 'Committed' column shows 0, 0, 0, and 20. The 'Min' and 'Max' columns show 0 for all locations. A red box highlights the 'On hand' column header and the 'On hand' values for the four locations, with a red circle around the 'On hand' header and a red circle around the 'On hand' values.

Location	Bin	On hand	On order	Committed	Min	Max
B Menlo Park		0	0	0	0	0
C Palo Alto		0	0	0	0	0
H Charlotte		0	20	0	0	0
R Redwood City		-14	0	20	0	0

The Inventory tab shows on-hand per location. Confirm the numbers are in the ballpark; the exact count lands on the go-live sync.

2

Confirm the cost

Click the **Costs** tab. This is one of the most important checks, because Rundoo uses cost to calculate your margins. Here is your first red flag: a product showing a cost of zero dollars. If you see one, make a note of the item.

A quick nuance: a few items are meant to be zero, like a special-order product you price at the counter, or a non-sellable placeholder. So a zero is not always a mistake. Flag the ones that should have a real cost and let your guide sort them out.

3

Confirm the price levels

Click the **Pricing** tab. Here you will see every price level for this item: your standard retail price, plus any contractor or volume tiers you use (they run from **Tier 1 Msrp** up to **Tier 11 Volume contractor**). Just confirm the prices you expect to see are there, and that no tier looks off.

While the product is open, glance at its department and class. When we bring your catalog over we do our best to sort every item into the right category, but it is an educated guess and sometimes an item lands in the wrong spot. Your sales and margin reports lean on those categories later, so if something is filed wrong, do not re-file it yourself. Flag it and your guide will re-map it.

4

Watch for duplicates as you browse

There is one more red flag, and you catch it from the Products list rather than inside a single item. As you scroll your catalog, if you spot the exact same item listed twice, that is a duplicate. Make a note of it, same as a zero-dollar cost. Rundoo does not merge products, so your guide fixes a duplicate by keeping one and retiring the other. That is their job, not yours.

5

Flag anything that looks off

For your top sellers where the cost looks right, the on-hand count is in the ballpark, and the price levels are all there, that is the happy path. You breeze past. For anything that does not look right, do not fix it yourself. Note the product's **Primary ID** from the top of its detail page, then send it to your Rundoo guide with exactly what you see, for example the product name and that its cost came over as zero. It lands on their list of things to fix before you go live, and the correction comes over with your final data.

KEEP IT HANDY

The three-number spot-check

ON-HAND COUNT

Inventory tab

In the ballpark is fine. Exact count comes over on the go-live sync.

COST

Costs tab

Red flag: a \$0 cost on an item that should have a real one.

PRICE LEVELS

Pricing tab

Your retail price plus any contractor or volume tiers you use.

DUPLICATES

Products list

Same item listed twice? Flag it. Rundoo has no product merge.

Good to know

- You are spot-checking, not auditing. If a handful of your top sellers look right, the bulk is almost certainly fine.
- Do not run a full inventory count to "fix" a number. A count done wrong can zero items out. The accurate count arrives on your go-live sync.
- Everything you flag gets fixed on Rundoo's side, so the correction survives the final overnight sync. Re-typing it yourself gets overwritten.

The ones that look right, you breeze past. Anything that doesn't, you flag. · rundocs.com
